What is Beamer?

Beamer is a LaTeX class for making slides. You write the slides as code and compile them to a PDF.

Why I Use It

- Equations look clean

Why I Use It

- Equations look clean
- Layout stays consistent across slides

Why I Use It

- Equations look clean
- Layout stays consistent across slides
- Overlays reveal points one at a time

Steps to Make a Deck

1. Pick the `beamer` class
2. Fill in title, author, date
3. Add one `frame` per slide
4. Compile with `pdflatex`

Equations

Quadratic formula:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Code on a Slide

```
#include <iostream>
int main() {
    std::cout << "Hello World";
    return 0;
}
```

Summary

Beamer is a good fit for technical talks: equations, code and step-by-step reveals all work out of the box.
